

Automated Risk Assessment for Client Onboarding

Beste Güney, Daria Horica, Irene Strauss, Alina Yaroshchuk

Julius Bär

Dataset and Challenges

1 Administrative Burden

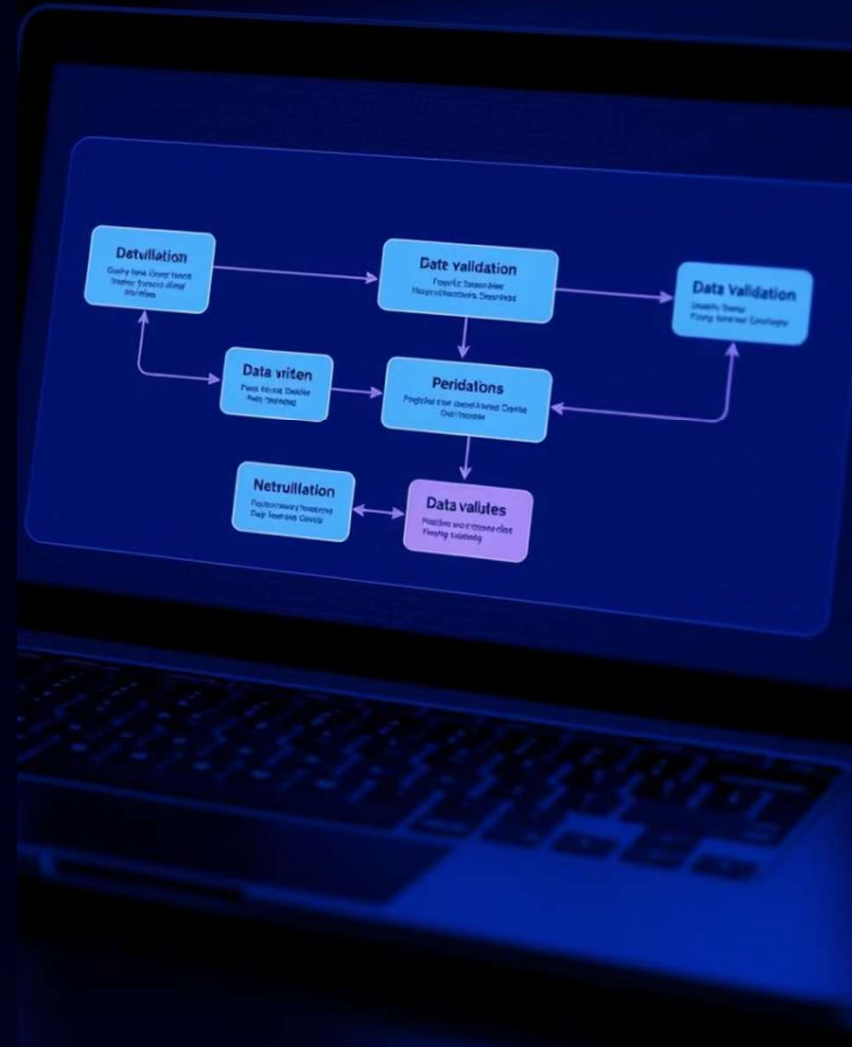

Manual checks

2 Data-Dependency

Addresses the high administrative burden of manual checks.

3 Explainable Decisions

Fairness and compliance

Expert-Guided Feature Engineering

Wealth Modeling

Aggregate savings and investments

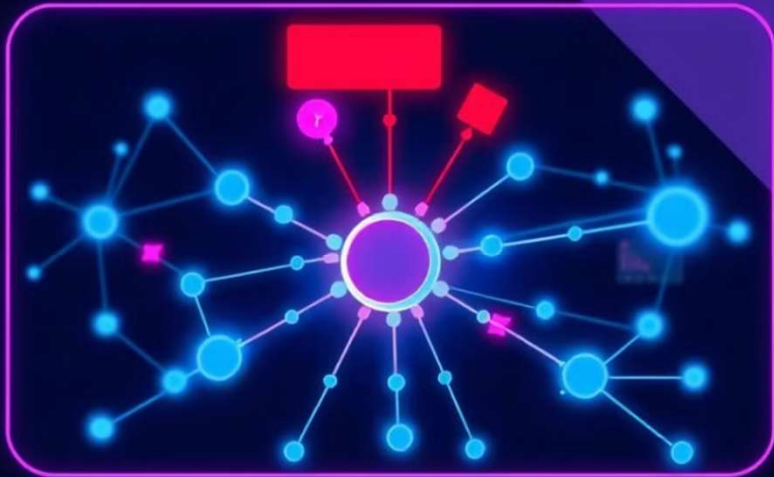

Consistency Scoring

Do income sources match evaluated assets?

Profitability Estimation

Is the user profitable?

AI-Powered Inconsistency Detection

1

Textual Embeddings
for Feature Engineering

2

Fine-Tuning LLM
Detecting subtle red flags

3

Future Ideas: Sentiment Analysis
Confidence Scoring

Prototype Implementation and Results

81%

Accuracy in predicting client acceptance.

100+

Models trained using AutoGluon.

Key Benefits

High Accuracy

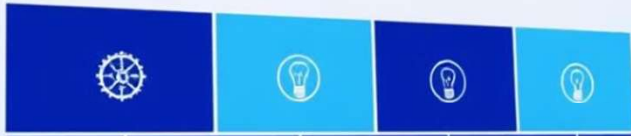

Interpretability

Ethical Compliance

Next Steps

Integrate LLM

Refine Features

Collaborate with experts.

Automate Reports

Develop rejection reports.

Integration with Real Data

Thank you for your attention!
